MINI P -4, NEW GENERATION OF MINI VERTICAL ELECTROPHORESIS SYSTEM

The Mini P-4 Cell has set the new standard for Mini Vertical Electrophoresis:

Easier to assemble, leakproof, and with a four-gel capacity that doubles the output of the traditional cell, the Mini P-4 cell combines traditional features with higher throughput and even greater reliability.

Modular Cells for Many Applications Interchangeable modules easily convert a Mini P-4 cell from one application to another. Each module fits into the same buffer tank and lid to form a complete cell.

The modular configurations are:

Mini P-4 electrophoresis cell — for running handcast or precast PAGE gel and (SDS)-PAGE gels

Mini TBC electrophoretic transfer cell — for western blotting

The Mini-P-4 cell is ideal for your vertical mini gel electrophoresis needs. Easy to use, easy to assemble, robust, and versatile, the cell accommodates up to four handcast or precast gels. Casting and running gels have never been quicker or easier.

Specifications:

Number of gels	1–4
Precast gels	precast gels
Handcast gels	Cast using spacer plates
Glass plate size (W x L)	
Short plate	10.1 x 7.3 cm
Spacer plate	10.1 x 8.2 cm

Dimensions (W x L x H)	12 x 16 x 18 cm

- Run up to 4 mini gels in less than an hour
- Run four 2-D gels in less than a day
- Evaluate sample preparation conditions
- Screen new samples and process discovery projects

MINI TBC ELECTROPHORETIC TRANSFER CELL

The Mini TBC cell is the perfect complement to the Mini P-4 vertical electrophoresis system.

- Transfers two mini format (7.5 x10 cm) gels in as little as 1 hour
- Cooling unit prevents buffer depletion during high-intensity transfers
- Cell performs low-intensity transfers by running at low voltage overnight
- Sturdy molded design protects platinum wire electrodes from breaking.

Membrane Filter

Membrane filters or “membranes” are microporous films with specific pore size ratings. Membranes retain particles and microorganisms that exceed their pore ratings by acting as a physical barrier and capturing such particles on the surface of the membrane.

Application

- General clean and filtration
- Sample Prep
- Environmental Monitoring and Analysis
- Filtration of Aqueous and Organic Solutions
- Fluid Monitoring
- Pharmaceutical Products Analysis
- Chromatography and Mass Spec Sample Prep
- Venting and Gas Filtration

Feature

- High Porosity: BRBLS™ thin membrane with high porosity provide high liquid and gas low per unit area. High porosity also provides high surface area for adsorption or binding
- Clean: As part of comprehensive quality program, only high purity raw materials and reagents are used to produce BRBLS membranes.
- Strong: BRBLS™ membranes are monitored for both burst and tensile strength. PTFE and Nylon are very strong for most aggressive applications.

Sealing Film

Designed for the sealing of multi-well plates, our adhesive sealing films minimize evaporation, prevent spillage and eliminate well-to-well contamination.

The secure sealing of all wells eliminates "edge effects" in sensitive ELISA assays. Additionally, our films can be used to seal tissue culture plates for short term storage, incubation, transport, and the containment of biohazardous

Large Capacity Rack

This line of plastic test tube racks are shipped flat in order to reduce shelf space and then simply snap together for use. The special design allows all samples to be incubated at the same temperature. These racks can be used in freezers without deforming or going brittle. They will not rot, rust or deform. Alphanumeric markings are molded into the racks to provide easy test tube identification. They are available in four colors for color coding test samples, or simply for aesthetics in the modern laboratory. They are stackable when empty.

Easy to assemble

- Produced from polypropylene (PP)
- Autoclavable at 121°C for 20 minutes
- Non-loading in a water bath

Taq DNA Polymerase

Taq DNA polymerase is a thermostable enzyme that catalyzes the polymerization of nucleotides in the 5' to 3' direction at 70-74°C and exhibits a half-time of 30 minutes at 95°C. This enzyme possesses 5'-exonuclease but without 3'-5' exonuclease activity (proofreading activity). The amplified products are up to 8 Kb with 3' adenosine residues and can be used directly in TA cloning.

s-Pfu DNA Polymerase

s-Pfu DNA Polymerase is a thermostable enzyme with a molecular weight of 90 kDa. It catalyzes the polymerization of nucleotides into duplex DNA in the 5'>3' direction, resulting in blunt-ended PCR products without 3'-dA overhangs. s-Pfu DNA Polymerase exhibits 3'>5' exonuclease (proofreading) activity that enables the polymerase to correct nucleotide-misincorporation errors, and lacks 5'>3' exonuclease activity. It is suitable for PCR and primer extension reaction that requires high fidelity when the PCR fragment is relatively shorter.

The extension rate of s-Pfu DNA Polymerase is about 600 bp/min in standard condition. The appropriate reaction temperature is 65-75 OC, the work concentration of dNTPs is 100-300µM, the work concentration of Mg2+ is 2-3mM, and the suitable pH is 8.1-9.1. The amount of enzyme is 1-1.5unit for 20µl PCR reaction, while 2-3units for 50µl PCR reaction.

Taq-red™ DNA Polymerase

Taq-red DNA Polymerase is an unique blend of U-Taq DNA Polymerase with an inert red dye. It offers the same performance as U-Taq DNA Polymerase. Several benefits are as follows:

This red dye enables quick and convenient visual confirmation of enzyme addition and reaction mixing.

1. After PCR amplification, samples can be removed from the reaction and loaded directly onto agarose gel without the addition of loading buffer or tracking dye. The red dye, acting as a tracking dye, migrates between bromophenol blue and xylenecyanol at about the same rate as 400-500 bp fragment.
2. The concentration of Taq-red is only 1unit/µl, so the enzyme can be transferred and added more accurately.
3. The enzyme generates PCR products with 3'-dA overhangs, suitable for T-A cloning.
4. 6 kb Lambda DNA and 2.1 kb Human genomic DNA can be amplified very well at our laboratory.

Pfu DNA Polymerase

Pfu DNA polymerase is isolated from the hyperthermophilic marine archaeobacterium. Pyrococcus furiosus. RT-PCR Kit

One-Step AMV/ M-MULV RT-PCR offers a unique system for performing RT-PCR in a single step, in a single tube. Traditionally, RT-PCR is performed in two reaction steps. In the initial reaction, first-strand cDNA is reverse transcribed from total or poly(A) RNA. Then, in a separate reaction, the cDNA is amplified by PCR using a Taq DNA polymerase. This kit allows cDNA synthesis and PCR to be performed in a single optimized buffer, with AMV/ M-MULV RT and Taq DNA polymerase. No additional reagents are required after the reaction is initiated. This method reduces the possibility of cross-contamination and provides a very convenient technique for gene expression.

Two-Step RT-PCR Kit

The Two-Step RT-PCR Kit has all the components required to perform First-strand cDNA synthesis followed by amplification of the cDNA product using a two-step process. In the first step, M-MLV Reverse Transcriptase is used to synthesize a DNA copy of input RNA. M-MLV RTase is a frequent choice for cDNA synthesis because of its ease of use and low intrinsic RNase activity. Oligo(dT)18 primers direct synthesis of a complementary strand of poly(A)⁺ mRNA. Random nonamer primers direct synthesis of sequences complementary to all RNA present in the reaction.

In the PCR step, a portion of the cDNA product is amplified using U-Taq DNA polymerase and input primers. U-Taq polymerase, buffer, dNTPs are included in this kit.

Key Features:

Optimized for high performance using M-MLV Reverse Transcriptase and Taq DNA polymerase.

Choice of priming methods: oligo(dT)18, random nonamer or gene-specific primers. Amplifies targets up to 1.5 kb very well at our laboratory.

Site-Directed Mutagenesis Kit

The Site-Directed Mutagenesis Kit can induce mutagenesis at the specific point of sequence that cloned on plasmid DNA. It guarantees 100% of efficiency in theory. Also it is very convenient and simple because it takes just two steps for all experimental procedures. The Site-Directed Mutagenesis Kit does not necessary using M13 vector and methylation step. Indeed, the Kit can induce mutation of nucleotide, re-mutation to wild type, mutation of codon and insertion even deletion. As the Kit has these characteristics, it is applicable to analysis for genomic/proteomic function. Also as inducing mutagenesis of specific gene, it can be used for protein engineering like protein development or improving productivity.

When you use this the Kit, you can have mutated clone as doing simple steps. (Design primer with own protocol, use the Enzyme for 15~18 cycles of PCR. Proceed transformation step after the Mutazyme treatment for mutated clone selection) In this theory, clones on LB agar plate are mutated around 100% and after sequencing, you can proceed to the next step.

Novel Green Plus (Syber Green)

The Novel Green Plus provides an easy 2-step method to stain the DNA band from DNA electrophoresis. This unique reagent ensures the DNA to be stained with a high sensitivity and good quality on the gel. Novel Green Plus is a next-generation DNA-binding dye with features ideal for use in quantitative real-time PCR (qPCR) and many other applications. We designed the dye by taking into consideration several essential dye properties relevant to PCR, including PCR inhibition, safety, and stability and fluorescence spectra of the dye. Ethidium bromide (EtBr), which presents sensitivity for detecting 1-5 ng double-stranded DNA (dsDNA) in the agarose gel analysis, has been the most common dye used for nucleic acid gel staining.

However, several drawbacks of EtBr have been understood, including that EtBr is a mutagen/carcinogen and presents a high risk of inducing cancer. Moreover, the ultraviolet (UV) light used to illuminate EtBr-DNA compounds probably results in skin or eye damage to the user if misconducted. It's also noted that exposure to the UV light might cause chemical modifications of the DNA samples in the gel, such as the formation of TT dimers, leading to challenges with the subsequent DNA manipulations. Reduced efficiency of transformation is observed by our scientists, after conducting ligation with the DNA samples isolated from the gel exposed to a longer period of UV illumination.

Nimble Juice

Nimble juice is a fast and sensitive fluorescent dye for visualization and quantitation of proteins separated by 1-D or 2-D SDS-PAGE. It comes as a 100x stock solution

that is simply diluted with water by the user to its working concentration. Nimble juice is normally low fluorescent but emits strong fluorescence (bright golden color) as bound to proteins. The staining procedure is a simple two-step protocol (ix and stain)

that can be completed in as little as 30 minutes. Gels to be stained are fixed with ethanol/acetic acid solution prior to staining with Nimble juice solution. A destain step is not normally recommended, but may be employed to reduce background, simply by agitating the gel in water for 1-5 minutes. Gels stained with Nimble juice fluorescent gel stain may be directly visualized with a variety of different UV-based fluorescence imaging systems. The maximum emission wavelength of protein-bound Nimble juice is near 570 nm. Nimble juice gives exceptional sensitivity and wide dynamic range for protein detection. The bound Nimble juice dye is easily removed from the protein by immersing the gel in sufficient water, thus it is well compatible with subsequent enzymatic digestion and mass spectrometry for proteomics applications. Stained gels may be stored in stain solution in the dark at 2-8°C; imaging sensitivity might be moderately enhanced after 4°C storage of the stained gel.

Storage: The product is stable for at least 6 months when stored at 2-8°C. Avoid exposure to temperatures greater than 37°C and protect from light.

RNasin (RNase inhibitor)

Electrophoresis grade

RNasin is a ribonuclease inhibitor extracted from human placenta with a molecular weight 51 kDa. It inhibits the activity of RNase by specifically binding up to RNase with a non-covalent bond. RNasin, free of RNase or Nickase, can maintain its activity at pH from 5 to 8, and the highest one at pH7.8. The concentration of RNasin is 20~40 units/μl. Store at -20oC.

Unit Definition

One unit is defined as the amount of enzyme required to incorporates 1 nmol of dTTP into acid-precipitable material in 10 min at 37oC using poly(A)+ RNA and oligo(dT)18 as template/primer.

Quality Assurance

Dnase and RNase activity is not detected after incubation of 1 μg of DNA and RNA with 200 units of M-MLV Reverse Transcriptase for 3 hours at 37~42°C.

M-Mulv Reverse Transcriptase (Rnase H Minus)

Bio Basic Reverse Transcriptase is a newly-engineered version of Moloney Murine Leukemia Virus (M-MuLV) reverse transcriptase with the highest thermal stability and least RNase H activity. It can be used to synthesize first strand cDNA by reverse transcription (RT) at a higher temperature for difficult RNA transcription and to get higher yields. It has a broad working temperature range from 37°C to 60°C, with cDNA product size up to 12Kb. The optimal first-strand cDNA synthesis temperature for this enzyme is around 50°C.

Storage: -20°C

AMV Reverse Transcriptase

A DNA polymerase which catalyzes the polymerization of DNA, using DNA, RNA or DNA: RNA hybrids and templates. Besides possessing 5'-3' DNA polymerase activity, the enzyme also possesses some RNase H activity which breaks apart RNA: DNA hybrids. It is used primarily for the synthesis of first and second strand cDNA and primer extensions. To a lesser extent, it is used for RNA sequencing and the preparation of probes for hybridization.

Plant Protein Extraction Kit

The Plant Protein Extraction Kit provides rapid recovery (as few as 20 minutes) of soluble proteins from plant tissue samples. The final protein extract is compatible with many downstream applications, including SDS-PAGE, 2-D gel electrophoresis, Western blotting, activity assays and a nitry purification. The Kit includes three components: an organic solution to lyse plant cells, an aqueous buffer to gently solubilize proteins and a protein-stabilizing reagent. The Kit has been tested on leaves, roots, flowers and seeds from various species, including Arabidopsis, tobacco, spinach, peas and soybeans. Extremely fibrous tissue samples, such as woody stems, may require additional mechanical grinding by devices not included in the kit. Depending on the particular application, additional components, such as phosphatase inhibitor and chelating agents may be added to the buffer. The kit is sufficient to extract protein from either 20 x 40 mg of fresh/frozen plant tissue or 20 x 10 mg of dried plant tissue.

Good View™ Nucleic Acid Stain

Good View™ Nucleic Acid Stain - An alternative to EtBr SBS Genetech

Good View Advantage:

1. Good View™ is noncarcinogenic in nature.
2. Good View™ allows visualization of DNA (>50ng) in the agarose gel under visible light.
3. Good View emits green fluorescence when bound to dsDNA and red fluorescence when bound to ssDNA or RNA.
4. 1ml of Good View™ is sufficient for 20L of agarose gel.

The agarose gel indicates the sensitivity of Gold View is equivalent to that of EB.

Sensitivity detection of Good View under UV transmission (wavelength 300 nm)

Sensitivity detection of EB under UV transmission (wavelength 300 nm)

Sterilization

- Autoclaving (121°C, 15 psig for 20 minutes) Clean and rinse item with distilled water before autoclaving. Certain Chemicals which have no appreciable effect on resins at room temperature may cause deterioration at autoclaving temperatures.
ALWAYS COMPLETELY DISENGAGE THREADS BEFORE AUTOCLAVING.
- Gas - Ethylene oxide, formaldehyde.
- Dry heat - 160°C for 120 minutes
- Disinfectant - Benzalkonium chloride, Formalin, Ethanol, etc.
- Radiation - gamma irradiated at 2.5 Mrad with unstabilized plastic.
- Sterilizing reduces mechanical strength. Do not use PC vessels for vacuum application if they have been autoclaved.

CLS LABORATORY GLASSWARE

CLS GLASSWARE

Made from finest Borosilicate glass (except a few products), at some of the best manufacturing facilities. A wide range of common lab requisites.

- Meets International specifications.
- High Chemical resistance
- Certified weights and validated methods used.
- High resistance to thermal shock.
- Exceptional optical clarity
- Wide range from lab size to custom size.

TECHNICAL DATA ON CLS GLASSWARE

Touff Glasswares are manufactured using low expansion 3.3 for borosilicate glass, characterized by their high heat-resistance and chemical stability.

Because of its properties, this glass is used in situations which place the highest demands on the heat-resistance and chemical stability of products as well as their neutrality with respect to the substances or preparations with which they come into contact, i.e. in Chemistry, Petro chemistry, the Food, Energy and metal working industries, health care, Microbiology, Pharmacy, Mechanical Engineering and Laboratories.

The Glass used in manufacturing CLS Glassware are smooth, non-porous and perfectly transparent with no catalytic action, and are corrosion-resistant even in demanding operating conditions upto 300°C without sudden changes of temperature. CLS Glassware is an environment-friendly product and is completely harmless from an ecological point of view.

CHEMICAL COMPOSITION OF GLASS USED IN MANUFACTURING CLS GLASSWARE.

Component	Amount (% by Weight)
SiO ₂	80.0
B ₂ O ₃	13.2
Al ₂ O ₃	2.5
Na ₂ O + K ₂ O	4.3

CHEMICAL PROPERTIES OF CLS

CLS glasswares are chemically stable, practically inert and characterised by high resistance to the effects of water, water vapour, acids, salt solutions and relatively high resistance to alkalis.

The glass is etched by Hydrofluoric acid and concentrated Trihydrogen Phosphoric acid and corroded by hot concentrated alkaline solutions. Constant alternation of acid and alkaline environment increased corrosion.

PHYSICAL PROPERTIES OF CLS GLASSWARE

The physical properties of CLS glassware as shown in the following table comply with the ISO 3585 and CSN ISO 3585 standards.

Mean coefficient of linear thermal expansion (ISO 7991) $3.3 \times 10^{-6} \text{ } ^\circ\text{C}$. Temperatures of main points in terms of Viscosity η in dPa x s

Borosilicate glass 3.3 for laboratory glassware is suitable for use in microwaves. Wherever laboratory glassware is not subjected to the highest thermal demands soda-lime-glass is used. This glass possesses good chemical and physical properties and is normally well suited to short - term exposure to chemical agents.

For your safety:

Glass is an environmentally friendly material. It is made from natural raw material sand, calcium carbonate and sodium carbonate. None of these substances have an adverse effect on either human beings or their surroundings. Glass can be reused and disposed off without any problems. In order for you to make safe and full use of its many advantages when working with glass instruments and components, you should take notice of several special features of their materials:

- Always work according to the normal laboratory safety rules and, if applicable, according to the manufacturer's instructions.
- Check each time you have received goods and before starting work that the glassware is undamaged.
- Assemble glass instruments and apparatus stress-free, because apparatus which is already under stress when it is assembled can fail during operation.
- Do not allow glass apparatus to be subjected to any sudden mechanical stress. Make sure that forces or stresses are only applied slowly and ensure slow stress compensation.
- Do not subject glassware to abrupt changes in temperature. Glass reacts extremely sensitively to such stress. Please note that the stronger the wall thickness of the glass, the more sensitively it reacts.
- The mechanical stability of glass is determined to a great degree by the condition of its surface. Nicks and scratches which occur during normal use, considerably reduce the theoretical stability.
- Glass instruments or components which are permanently under pressure should be repeatedly inspected for damage. Glasses which are already damaged should never be subjected to pressure or vacuum.
- Always wear protective glasses and gloves or protective clothing when either of the tasks or its use for resulting substances make this necessary.

For your information :

The dimension given in the brochure are nominal dimension without any tolerances. If standards have been mentioned then the dimension and sizes are in accordance with these. In all other cases, the dimensional tolerances of the CLS manufacturing plant apply.

- The illustrations are non-binding.
- With the appearance of this catalogue, previous editions are no longer valid.
- Axiva reserves the right to make technical and standard-related alterations.
- Touff articles for which standard pack quantities are given can only be supplied in these quantities.
- We will confirm your order according to the current version of our General Terms and Conditions.
- Equipments used for calibration of volumetric glassware are traceable to Indian National Standards.
